

Flower Flairs

Step by Step Instructions *to Plant Flowers with Flair!*

What you will need:

- **Natural Earth Air Dry Clay** - We like to use air-dry so it will dry out and disintegrate in your yard as time goes by.
- **Soil** - Choose a healthy soil to mix in with the clay to provide the seeds a cozy place to sprout.
- **Seeds** - Choose a flower seed that is local or one that will be beneficial for pollinators in your area.
- **Water** - You will need to moisten seeds and soil to help it all stick together.
- **Food Coloring*** - Jazz up your Flower Flair

Step 1:

- Pinch off a golf ball sized bit of clay and knead until it is softened and moldable.
 - **RECYCLE TIP:** You can substitute the clay product with shredded newspaper, just shred newspaper, add water and soil and seeds!
- A food coloring to your clay and knead in to get your desired look!

Step 2:

- Add small amounts of soil at a time until there is a good mix of soil and clay and the clay still holds the shape you envision.

Step 3:

- Flatten the Flower Flair mixture and spray a small amount of water on it.
- Place seeds on the dampened mixture.

Step 4:

- Ball your Flower Flair up, or shape it into an animal, flower, letter or shape of your choosing. Be creative!

Step 5:

- Plant with some FLAIR! You can use a store-bought slingshot to launch your flower flair into an area in your yard, or you can try making one with a "Y" shaped stick and some rubber bands!
